

Quick Start Designer

The user has the opportunity to design his own Quick Start screen and add shortcuts to the modules he most frequently uses. He can access his own data with a filter implementation and isolate records that he is interested in.

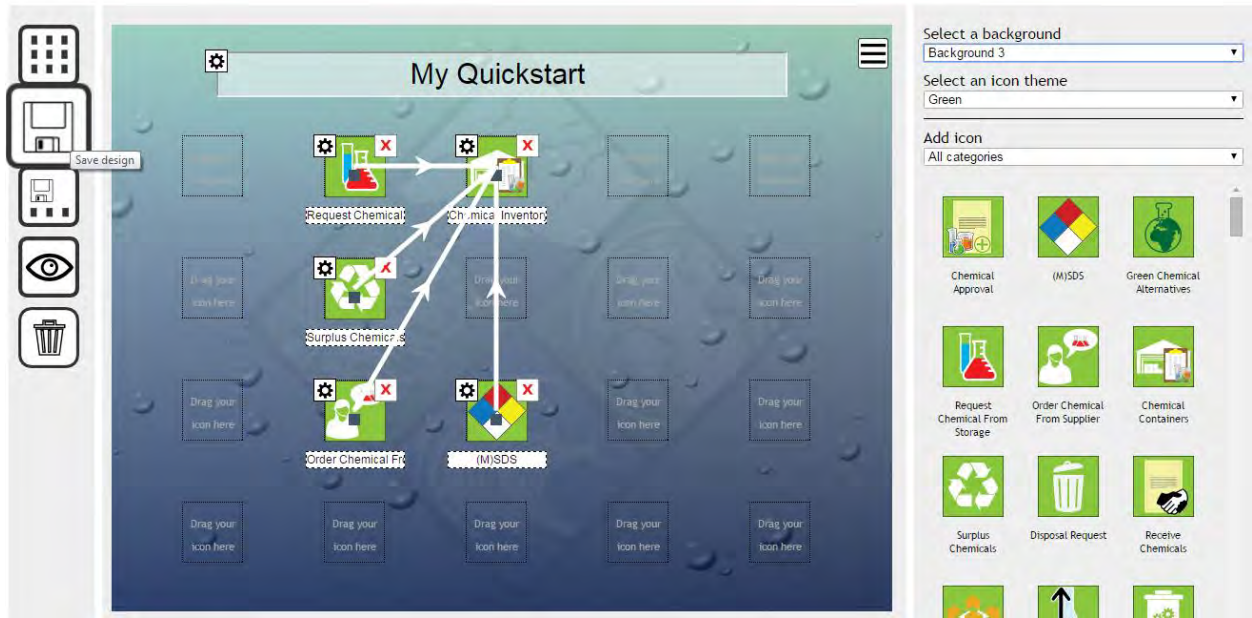

EXAMPLE:

- Open the Designer to customize the Quick Start page.
- The user has the option to create a new design or load an existing one for the installation, the group or the user.

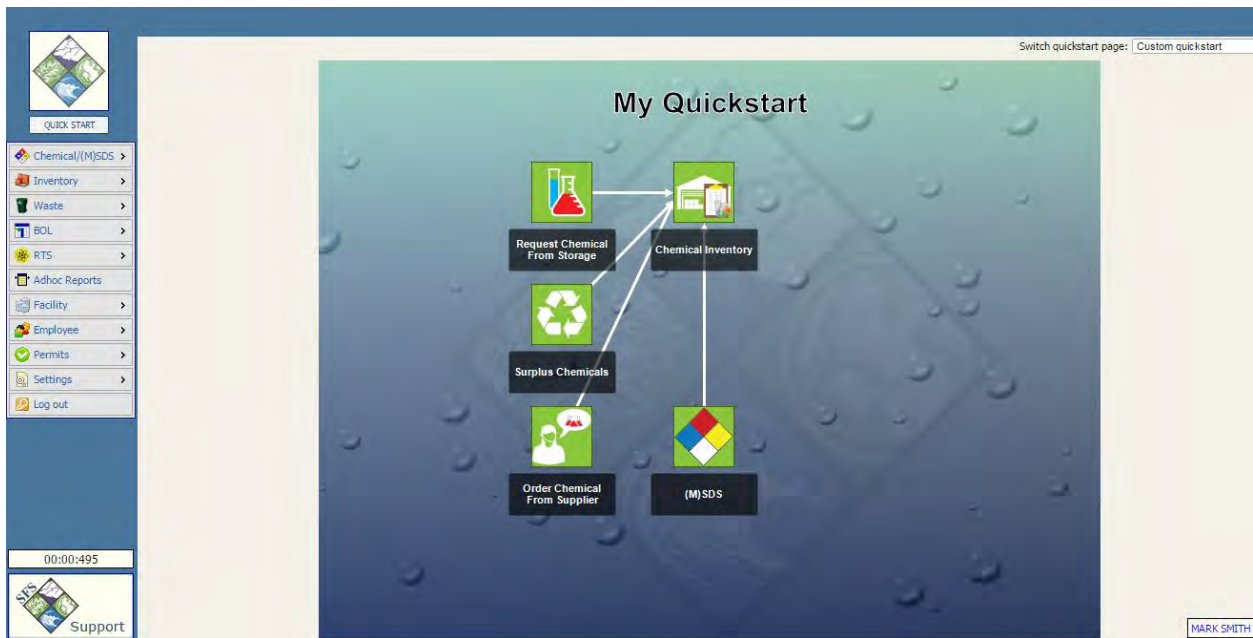

- There is a variety of options in order for the user to adjust the quick start exactly how he wants it:
 - a) Select icons (shortcuts of the forms) and place them in the custom quick start screen with drag-and-drop action.
 - b) Design arrows between the icons, which indicate their correlation.
 - c) Choose a background from the recommended options.
 - d) Customize the colors of the icons

e) Name the Quick Start

- Preview the design before saving it.
- This will be the default Quick Start for the installation, group or user.

- The custom Quick Start is also available from the *Switch Quickstart page* option at the upper right corner of the EMS screen.
